

ALIAS P/L are pleased to offer and recommend regular Microbiological Water Testing & Sampling of ALL Water Applications, especially Swimming Pools & Spa's to the NSW Health Guidelines for Disinfection Public Swimming Pools & Spas;

- EHF &B 960106 (June 1996)
- Guidelines are as follows;

<u>Bacteriological Criteria</u>	<u>Acceptable Level</u>
SPC	less than 100 cfu/mL
Thermo tolerant (Faecal Coliforms)	0/100 mL
Pseudomonas Aeruginosa	0/100mL

After the initial water sample and allowing the correct incubation time required for each sample, a full Test Report & Water Analysis is supplied to each and every customer, by an independent laboratory.

This laboratory is accredited by the National Association of Testing Authorities (NATA) Australia.

Should your centre NOT comply with the guidelines, YOU will be contacted immediately by one of our staff for further action.

This usually means the immediate closure of the offending body of water (i.e.) Spa, a through cleaning regime, super chlorination, chemical addition, etc and re-testing of the water after the pre treatment, in which we are involved every step of the way!

We work with you and are available for each and every step of the way 24/7!

Should you require any further information on Bacteriological Water Sampling and Testing, or would like to organise for an actual sample at your centre, please refer to the 'contact us' page of the web, and we will take care of the rest!
